

## Delta-V 480 65mm EDF System Addendum/Advisory

The Delta-V 480 Ducted Fan System with the 4000Kv motor (EFLDF480) and the system with the 4800Kv motor (EFLDF480B) are pre-assembled by our factory with the motor attached to the fan unit.

E-flite recommends you inspect your EDF system to confirm all screws and setscrews are tight and secure. We also recommend you check to see if blue, non-permanent, thread locker was added to each screw and setscrew location. If you do not notice thread locker, please add to each location noted below to prevent any loosening due to vibration.

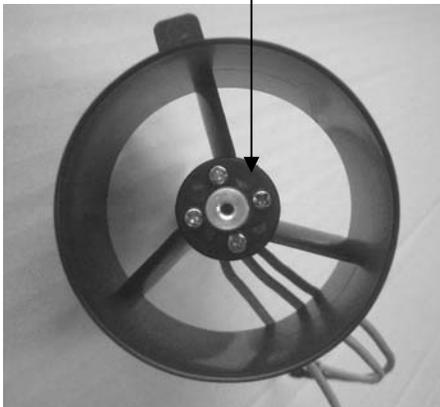

Motor Setscrew

Rotor Adapter Setscrews (2) (both sides)

Screws used to Mount  
EDF to Motor (4)

Screw Attaching Rotor
