

- ☐ Practice with RealFlight
- ☐ Charge the flight battery fully
- ☐ Find a safe and open area to fly in
- ☐ ALWAYS turn the transmitter on first
- ☐ Make sure all switches are in the 0 position
- ☐ Lower the throttle/left hand stick to the lowest position
- ☐ Activate Throttle Cut by moving switch H to the 1 position
- ☐ Install a fully charged battery in the aircraft and plug the battery in
- ☐ Keep the aircraft stationary until the receiver initializes and the control surfaces cycle
- ☐ Check to make sure all of the controls (ailerons, elevator, rudder and nose wheel steering) move freely and in the proper directions
- ☐ Carefully place the airplane on the ground for taxi or takeoff
- ☐ Disable Throttle Cut by moving switch H to the 0 position
- ☐ Taxi into position to ALWAYS take off into any wind
- ☐ Take off into the wind by gradually moving the throttle/left hand stick to the highest position
- ☐ Have fun flying!
