

ParkZone Sukhoi BNF Transmitter Setup

The Setup for your first flight, you can fine tune for your own skills after the first flight.

Best TX - DX6i, DX7, X9303

1) Select a new model memory and do a reset to make sure all settings are clear

2) Set all reverse switches to Normal (Spektrum and JR TX)

3) Dual Rates: These are very important!

Elevator High rate 100% with 50% EXPO

Elevator Low rate 70% with 30% EXPO

Aileron High rate 100% with 50% EXPO

Aileron Low rate 60% with 50% EXPO

4) Use Sub Trim to adjust all control surfaces to neutral

5) Place the flight battery in the REAR most position (yes that's right)

6) USE LOW RATE on the first flight!!

Living rooms are not big enough for first flights, again we suggest outdoors with calm conditions for your first flight.
