### TLR Shock Oil Facts

- The only R/C shock oil that is precisely mixed and produced in the U.S within TLR's tight engineering tolerances. Each batch is measured using TLR's viscometer to ensure every batch is consistent with the last. Other oils vary up to 10%. This means competitors 30wt shock oil can be either 27wt or 33wt.
- The only R/C shock oil that is color coded for easy identification after rebuilds. This makes remember what oil you put in the shocks easy to remember.
- The largest assortment of R/C shock oils.
- Best value – We are the price leader with the best value for shock oil. How? We produce our oil in-house allowing us to take advantage of quality and lower cost.
- 120 ml bottles are great for any dealer that sells large scale vehicles. Generally, a 60ml bottle will barely cover four large scale shocks.
